

Noisy Enviroments...

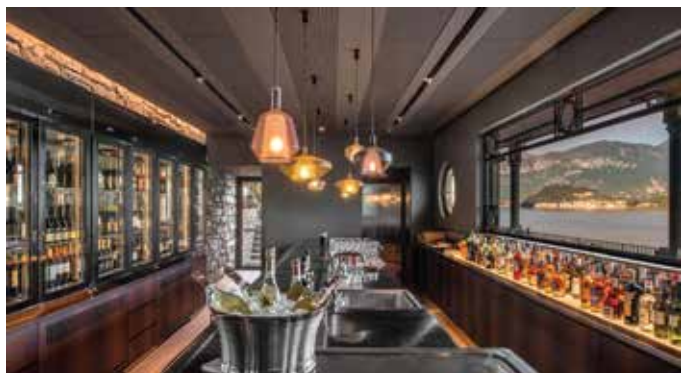

customers do not return, need an acoustic correction

Because of too much noise, at the restaurant, bar or pizzeria, the customer does not return the second time ...

The reviews on TripAdvisor, can seriously damage, even in a serious way, restaurants, influencing the choice of the customer, for example if going to a restaurant, pizzeria, bar, hotel, farm, is too noisy they will not return a second time, even if the quality of the food and service are excellent. We live in an age where people are constantly looking for a better quality of life in any environment, but especially in meeting places.

Review TripAdvisor excellent food, but the place was too noisy, pity I would have come back.

Productivity reduction

The acoustics are one of the factors often underestimated by the owners of bars and restaurants that often pay little attention to this aspect, without thinking that when a customer is not at ease, because of too much noise, he tends not to return a second time and write a negative review influencing many other people, who will discard a priori the idea of having lunch or dinner in that place. Furthermore, even the personnel themselves are forced

In addition, even the staff is forced for hours to work in a noisy environment, showing a reduction in productivity as well as distraction and stress, not offering the customer the right treatment.

The correct acoustics of a restaurant, bar, pizzeria, has the effect of increasing the number of customers, encouraging attendance, comfort and permanence with a clear economic return ..

Noisy Enviroments...

customers do not return, need an acoustic correction

An acoustic correction can substantially improve the liveability of a closed environment, transforming it into an extremely comfortable place from this point of view.

The Acoustic Comfort, will make the difference in the choice of customers looking for an environment of relaxation and well-being, as well as good food and service.

Because of too much noise, at the restaurant, bar or pizzeria, the customer does not return the second time ...

The targeted introduction of sound-absorbing units in the ceiling or walls can solve the problem, as evidenced by numerous interventions made of acoustic correction by Coverd
